

State Wildlife Action Plans: Eight Required Elements

Congress identified eight required elements to be addressed in each state's wildlife action plan (technically called a "comprehensive wildlife conservation strategy"). Congress also directed that the plans must identify and be focused on the species in greatest need of conservation yet address the full array of wildlife and wildlife-related issues.

- (1) **Information on the distribution and abundance of species of wildlife**, including low and declining populations as the state fish and wildlife agency deems appropriate, that are indicative of the diversity and health of the state's wildlife; and,
- (2) **Descriptions of extent and condition of habitats and community types** essential to conservation of species identified in (1); and,
- (3) **Descriptions of problems** which may adversely affect species identified in (1) or their habitats, **and priority research and survey efforts** needed to identify factors which may assist in restoration and improved conservation of these species and habitats; and,
- (4) **Descriptions of conservation actions** proposed to conserve the identified species and habitats and priorities for implementing such actions; and,
- (5) **Proposed plans for monitoring** species identified in (1) and their habitats, for monitoring the effectiveness of the conservation actions proposed in (4), and for adapting these conservation actions to respond appropriately to new information or changing conditions; and,
- (6) **Descriptions of procedures to review the plan** at intervals not to exceed ten years; and,
- (7) Plans for **coordinating the development, implementation, review, and revision of the plan with federal, state, and local agencies and Indian tribes** that manage significant land and water areas within the state or administer programs that significantly affect the conservation of identified species and habitats.
- (8) **Broad public participation** is an essential element of developing and implementing these plans, the projects that are carried out while these plans are developed, and the species in greatest need of conservation.

Teaming with Wildlife

A coalition of more than 5,000 groups working together to prevent wildlife from becoming endangered.
